**GECT CSE S6**

# Experiment 7

- a) Display the header information of UDP and TCP packets during client-server communication using raw sockets.
- b) Develop a packet capturing and filtering application using raw sockets.

## Executing program

### Part a

- Code is provided in the **raw\_tcp.c** and **raw\_udp.c**. (Tested and verified on Ubuntu 20.04)

```
gcc raw_tcp.c -o raw_tcp && sudo ./raw_tcp
```

```
gcc raw_udp.c -o raw_udp && sudo ./raw_udp
```

- **Note: Raw sockets must be executed in *sudo* mode.**
- **Since we cannot multitask same time, we are looping the send command infinite time. To stop the program, use CTRL + C**

### TCP Raw Sockets Algorithm

- TCP raw sockets are created
- Create new datagram and allocate it in memory
- Assign the parameters of headers that include IP header, TCP header, and data
- Checksum can be included to validate the integrity of the information
- Forward the data from the server to the client
- Exit (We can also loop through the action if required)

P. T. O

### UDP Raw Sockets Algorithm

- UDP raw sockets are created
- Create new buffer and allocate it in memory
- Assign the parameters of headers that include IP header, UDP header, and data
- Checksum can be included to validate the integrity of the information
- Forward the data from the server to the client
- Exit (We can also loop through the action if required)

### **Part b**

- Code is provided in the **sniffer.c**. (Tested and verified on Ubuntu 20.04)

```
gcc sniffer.c -o sniffer && sudo ./sniffer
```

- **Note: Raw sockets must be executed in *sudo* mode.**

### Algorithm

- Create buffers and allocate dynamically
- Create web sockets
- Process the packets based on the packet received.
- $Iphrd = \text{size of buffer} + \text{ethhdr}$
- If the TCP is received print the TCP header information, apply the same action to UDP

P. T. O

## Output / Screenshots

### Part a

#### Raw TCP

```
$ gcc raw_tcp.c -o raw_tcp && sudo ./raw_tcp
Source IP : 192.168.1.2
Packet Send. Length : 46
Source IP : 192.168.1.2
Packet Send. Length : 46
```

#### Raw UDP

```
hp@hp ~/Documents/S6/Network Lab/Exp 7 <M
$ gcc raw_udp.c -o raw_udp && sudo ./raw_
raw_udp.c: In function 'main':
raw_udp.c:96:24: warning: implicit declarat
